## Experience

01/21 – **University of Wisconsin – Madison**, *Research Assistant*, Madison, WI.

Present Advisor: Josiah P. Hanna

- My research focuses on improving the data efficiency of reinforcement learning (RL) by controlling the distribution of data from which an RL agent learns.
- Identified aspects of data augmentation that improve the data efficiency of RL and successfully applied these insights to a **real-world robotics task**.
- Demonstrated that on-policy policy gradient algorithms are more data efficient with **adaptive, off-policy sampling** than on-policy sampling.

05/21 – **Sandia National Laboratories**, *Research Intern*, Albuquerque, NM.

11/23 Advisor: Drew Levin

- Deep reinforcement learning for power systems management.
- From May 2022 - Nov 2023, I served as a consultant for reinforcement learning projects.

09/19 – **University of Wisconsin – Madison**, *Research Assistant*, Madison, WI.

09/20 Advisor: Jignesh Patel

- Built the query execution and storage engines of [Hustle](#), a scalable data platform built on top of Apache Arrow.
- Designed a variant of the Lookahead Information Passing (LIP) query execution strategy with improved robustness in dynamic data environments for Hustle. [[github](#)]

10/16 – **University of Pittsburgh**, *Research Assistant*, Pittsburgh, PA.

08/19 Advisor: Vladimir Savinov

- Designed and optimized the first search for new hadronic  $W_{bJ}$  states in data collected by the Belle experiment. [\[thesis\]](#)
- Created tools to monitor TOP Level-1 trigger performance for the Belle-II experiment.
